

SPRINT – 1 PROJECT DOCUMENT

Date	28 October 2022
Team ID	PNT2022TMID27643
Project Name	Flight Delay Prediction Using Machine Learning

DEVELOPMENT PHASE:

SPRINT-1:

Outline:

1. Data Pre-processing
2. EDA/Data Analysis
3. Feature Engineering
4. Model Building
5. Saving Best Model

Required Libraries:

- Pandas - Data Pre-processing
- Numpy - Data Pre-processing, Analysis
- Matplotlib - Visualization
- Seaborn - Visualization
- Imblearn - Balancing Data
- Sklearn - Model Building
- Pickle - Model saving

Software/Tool:

- Anaconda- Jupyter Notebook
- Used Language Python

Data Pre-processing:

Data Collection:

Dataset is collected from the IBM career smartinternz portal in Guided Project.

Dataset description:

The dataset contains 31 variables with various data types such as string, object, time, integer, float.

Data columns (total 31 columns):

#	Column	Non-Null Count	Dtype
0	YEAR	11231 non-null	int64
1	QUARTER	11231 non-null	int64
2	MONTH	11231 non-null	int64
3	DAY_OF_MONTH	11231 non-null	int64
4	DAY_OF_WEEK	11231 non-null	int64
5	UNIQUE_CARRIER	11231 non-null	object
6	TAIL_NUM	11231 non-null	object
7	FL_NUM	11231 non-null	int64
8	ORIGIN_AIRPORT_ID	11231 non-null	int64
9	ORIGIN	11231 non-null	object
10	DEST_AIRPORT_ID	11231 non-null	int64
11	DEST	11231 non-null	object
12	CRS_DEP_TIME	11231 non-null	object
13	CRS_DEP_TIME.1	11231 non-null	int64
14	DEP_TIME	11124 non-null	object
15	DEP_TIME.1	11124 non-null	float64
16	DEP_DELAY	11124 non-null	float64
17	DEP_DEL15	11124 non-null	float64
18	CRS_ARR_TIME	11231 non-null	object
19	CRS_ARR_TIME.1	11231 non-null	int64
20	ARR_TIME	11116 non-null	object
21	ARR_TIME.1	11116 non-null	float64
22	ARR_DELAY	11043 non-null	float64
23	ARR_DEL15	11043 non-null	float64
24	CANCELLED	11231 non-null	int64
25	DIVERTED	11231 non-null	int64
26	CRS_ELAPSED_TIME1	11231 non-null	object
27	ACTUAL_ELAPSED_TIME1	11231 non-null	object
28	CRS_ELAPSED_TIME	11231 non-null	int64
29	ACTUAL_ELAPSED_TIME	11043 non-null	float64
30	DISTANCE	11231 non-null	int64

dtypes: float64(7), int64(14), object(

Columns Description:

Dest means Destination Airport.

Crs_dep_time and crs_arr_time is planned departure and arrival time.

Crs_elapsed_time is estimated travel time as per plan.

Arr_time and dep_time are actual arrival and departure time.

Actual_elapsed_time is actual travelled time

To pre-process our dataset, we need to import above mentioned required libraries, then import data using pandas.

This data does not contain any duplicated values and null values except in arrival , departure time columns, because these left empty when flights are cancelled.

Descriptive Analytics:

```
In [19]: data1.describe()
```

Data Analysis And Visualization:

This graph shows the positive trend and strong binding between arrival and departure delay.

```
plt.scatter(data1["DAY_OF_MONTH"],data1["DEP_DELAY"],color="red")
plt.subplot(2,1,2)
plt.scatter(data1["DAY_OF_MONTH"],data1["ARR_DELAY"],color="yellow")
plt.show()
```

This above picture shows the relationship between day of month and delays.

This above boxplot shows the trends of days of the week and delay, Monday and Saturday had high delays.

This above boxplot shows the seasonal relationship between months and delays. August had highest no of delays.

Correlation between columns:

Feature Engineering:

We engineered Season from the month according to the analysis

```
In [25]: data1.groupby(by="DAY_OF_WEEK")["DEP_DEL15"].sum()
```

```
Out[25]: DAY_OF_WEEK
1      253.0
2      213.0
3      204.0
4      245.0
5      250.0
6      198.0
7      226.0
Name: DEP_DEL15, dtype: float64
```

```
In [26]: data1.groupby(by="MONTH")["DEP_DEL15"].sum()
```

```
Out[26]: MONTH
1      113.0
2      115.0
3      104.0
4       96.0
5       86.0
6      168.0
7      219.0
8      246.0
9       88.0
10      86.0
11      66.0
12     202.0
Name: DEP_DEL15, dtype: float64
```

Then Engineered NDELAY column from the summary of ARR_DEL15, DEP_DEL15, CANCELLED, DIVERTED columns.

Splitted NDELAY as dependnr column and others independent columns after removing unnecessary columns.

Data Balancing:

We balanced our using SMOTE technique which works based on KNN principle.

Balancing Dataset Using SMOTE Technique

```
In [48]: from imblearn.combine import SMOTETomek
smote=SMOTETomek(sampling_strategy={1:2000,2:2000,3:400,4:700},random_state=42)
x1,y2=smote.fit_resample(x,y)
y2.value_counts()
```

```
Out[48]: 0.0      8316
1.0      1537
2.0      1493
4.0       634
3.0       340
Name: NDELAY, dtype: int64
```

Encoding Categorical columns into numerical columns:

We encoded ORGIN ,DEST into numerical columns.

Model Buliding:

We builded

Decision Tree with 0.7536525974025974
Random Forest with 0.8368506493506493
SVM with 0.6128246753246753
KNN with 0.7280844155844156
Logistic Regression with 0.6830357142857143

We will explore only Random Forest and Decision Tree which have high accuracy

Random Forest:

Testing Sensitivity for Random Forest 0.9360230547550432
Testing Specificity for Random Forest 0.8716577540106952
Testing Precision for Random Forest 0.9854368932038835
Testing accuracy for Random Forest 0.8368506493506493

Decision Tree:

Testing Accuracy for Decision Tree 0.8849804578447794
Testing Sensitivity for Decision Tree 0.9400131839156229
Testing Specificity for Decision Tree 0.5802919708029197
Testing Precision for Decision Tree 0.9253731343283582
Testing accuracy for Decision Tree 0.7516233766233766

Model Saving:

Random Forest gives the best accuracy then others , so we save random forest model using pickle.

```
In [71]: import pickle
```

```
In [72]: pickle.dump(rf,open("rfmodel.pkl",'wb'))
```

Conclusion:

In this sprint , we builded our model , evaluated and saved. In next sprint, we deploy our model IBM cloud using IBM Watson and building Dashboard.
